

Tube Trap

The tube trap is an alternative to the standard inlet valve adapter. It provides a system to catch large debris that should not be vacuumed into the central system. Rags, gloves, pieces of skids, shop towels, bolts, and other debris can jam a rotary airlock or get logged into the tubing system. The tube trap captures these items at the inlet valve so the operator can clear these themselves before they enter the system.

When used with the sight glass assembly, the operator can see objects trapped visually to identify whether they need to be cleared quickly.

- Tube Trap adapters are 304 stainless steel.
- Heavy duty construction.
- Works with standard inlet valves and can be retrofitted to existing systems with straight drops.

Hose Adapter

15-SS-TT-HA150 1-1/2" Hose Adapter - 304 Stainless Steel with catch cage

20-SS-TT-HA200 2" Hose Adapter - 304 Stainless Steel with catch cage

Sight Glass

25-CS-TT-5050 2-1/2" Tube trap, carbon steel, with coupling and sight glass

25-SS-TT-5070 2-1/2" Tube trap, stainless steel, with coupling and sight glass
